### Note

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publications Distribution, Statistics Canada, Ottawa, KIA 0T6, or to Publishing Centre, Supply and Services Canada, Ottawa, KIA 0S9.

Inquiries about this publication should be addressed to:

Energy and Minerals Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A OT6 (telephone: 996-3139) or to a local Advisory Services office:

| St. John's | (Nfld.) | (726-0713)   |
|------------|---------|--------------|
| Halifax    |         | (426 - 5331) |
| Montréal   |         | (283-5725)   |
| Ottawa     |         | (992-4734)   |
| Toronto    |         | (966-6586)   |
| Winnipeg   |         | (949-4020)   |
| Regina     |         | (359-5405)   |
| Edmonton   |         | (420 - 3027) |
| Vancouver  |         | (666-3695)   |

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1-800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

### Nota

On peut se procurer cette publication, ainsi que toutes les publications du gouvernement du Canada, auprès des agents autorisés locaux, dans les librairies ordinaires ou par la poste.

Les commandes par la poste devront parvenir à Distribution des publications, Statistique Canada, Ottawa, KlA 0T6, ou à Imprimerie et édition, Approvisionnements et services Canada, Ottawa, KlA 0S9.

Toutes demandes de renseignements sur la présente publication doivent être adressées à:

Section de l'énergie et des minéraux, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, KlA OT6 (téléphone: 996-3139) ou à un bureau local des Services consultatifs situé aux endroits suivants:

| (726-0713)   |
|--------------|
| (426 - 5331) |
| (283 - 5725) |
| (992-4734)   |
| (966-6586)   |
| (949-4020)   |
| (359-5405)   |
| (420 - 3027) |
| (666-3695)   |
|              |

On peut obtenir une communication gratuite avec le service régional d'information statistique de la Nouvelle-Écosse, du Nouveau-Brunswick et de l'Île-du-Prince-Édouard en composant 1-800-565-7192 En Saskatchewan, on peut communiquer avec le bureau régional de Regina en composant 1-800-667-3524, et en Alberta, avec le bureau d'Edmonton au numéro 1-800-222-6400.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
  - néant ou zéro.
  - - nombres infimes.
  - P nombres provisoires.
  - r nombres rectifiés.
  - x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

### NTRODUCTION

The survey for this publication was conucted by Statistics Canada with the coperation of the Canadian Electrical Assoiation and various federal government departents. It endeavours to provide a detailed isting of prime movers and generating equipent installed as of December 31, 1978. Survey coverage is limited to those utilities nd companies which have at least one plant ith a total generating capacity of over 500 w. and is exclusive of auxiliary equipment nstalled only for generating station service.

Plants operated by each utility or company re listed alphabetically and the generator nits are listed in chronological sequence.

This edition is presented in a new format. The major changes incorporated involve; the elimination from print of data which are repetitious (e.g., over 95% of all generators have a frequency of 60) or incomplete (e.g., noment of inertia data available for only 40% of all units) and the publication of the principal fuel for thermal plants. "Data not now shown in this revised publication format are available on request."

Between the two World Wars, three editions f a "Directory of Central Electric Stations" ere produced by the Dominion Water Power and eclamation Service of the Department of the nterior in collaboration with the Dominion ureau of Statistics. In this directory, both he equipment and the service provided by lectric utilities and companies which sold art of their generation were described in onsiderable detail but no information was rovided on industrial plants which produced lectric energy solely for own use. Also, no nformation was obtained from plants located n what is now the province of Newfoundland. he last of these directories was published n 1928, although a supplement was issued in 936.

In 1937, the Dominion Bureau of Statistics roduced a mimeographed list of "Power Plants f Large Central Electric Stations". This ist grouped hydro and thermal plants by provnce and company showing their total horse-ower capacity and precise geographic location.

### INTRODUCTION

L'enquête qui a servi à cette publication a été effectuée par Statistique Canada avec la collaboration de l'Association canadienne de l'électricité et divers ministères fédéraux. On s'applique à fournir une liste détaillée des moteurs primaires et des générateurs électriques installés au 31 décembre 1978. La couverture de l'enquête se limite aux services d'utilité et aux sociétés ayant au moins une centrale dont la puissance génératrice totale dépasse 500 kW et ne comprend pas le matériel auxiliaire installé exclusivement au profit des centrales génératrices.

Les centrales exploitées par les divers services d'utilité et les diverses sociétés figurent dans l'ordre alphabétique, et les générateurs figurent dans l'ordre chronologique.

Le présent numéro adopte une nouvelle présentation. Parmi les principaux changements, mentionnons; l'élimination des données redondantes (ex., 95 % des générateurs ont une fréquence de 60) ou incomplètes (ex., les données sur le moment d'inertie n'englobent que 40 % des unités) et la publication des données sur le combustible principal des centrales thermiques. Les données anciennement publiées sont fournies sur demande.

Entre les deux guerres mondiales, trois éditions d'un "Répertoire des centrales électriques" ont été publiées par le service fédéral responsable de l'énergie hydro-électrique au ministère de l'Interieur, en collaboration avec le Bureau fédéral de la statistique. Ce répertoire décrivait d'une manière très détaillée le matériel des services d'utilité et des compagnies qui vendaient une partie de l'énergie qu'elles produisaient, de même que les services assurés par ces entreprises. Cependant il ne comportail aucun renseignement au sujet des centrales industrielles qui produisaient de l'électricité pour leur usage exclusif. Aucun renseignement ne parvenait de ce qui est devenu la province de Terre-Neuve. Le dernier de ces répertoires a paru en 1928, bien qu'un supplément a été publié en 1936.

En 1937, le Bureau fédéral de la statistique a établi une liste polycopiée qui énumérait les "usines productrices des grandes centrales électriques". Cette liste groupait les centrales hydro-électriques et thermiques par province et par société, et indiquait leur capacité totale de production en cheval vapeur ainsi que leur emplacement exact.

Previous reports titled <u>Inventory of Prime</u>
Mover and <u>Electric Generating Equipment</u> were
published for 1958, 1961, 1966 and 1969.
Beginning with the 1971 edition, this report
is published on an annual basis.

Auparavant, sous le titre <u>Inventory of Prime</u>
Mover and Electric Generating <u>Equipment</u>, des publications hors série ont paru en 1958, 1961 et 1966 et un dernier rapport sous le titre <u>Inventaire des moteurs primaires et des générateurs électriques a paru en 1969. Commençant avec l'édition de 1971, ce rapport est publié à chaque année.</u>

### REVIEW OF SURVEY RESULTS

Total installed generating capacity in Canada as of December 31, 1978 was 74,506,768 kw., an increase of 5.5% over the 70,575,244 kw., recorded a year earlier. Increases by type were: hydro, 1,087,554 kw. (2.6%); steam, 2,735,537 kw. (10%); internal combustion, 39,093 kw. (6.4%) and gas turbines, 69,340 kw. (3.5%).

In 1978 the installed hydro generating capacity increased to 41,897,519 kw. from 40,809,965 kw. Installation by Hydro Quebec of three 151,300 kw. units at Outardes No. 2 accounted for 41.7% of the total increase. Nova Scotia Power Corporation installed two 100,000 kw. units at Wreck Cove. Manitoba Hydro added four 98,000 kw. units at Long Spruce and three 31,000 kw. units at Jenpeg.

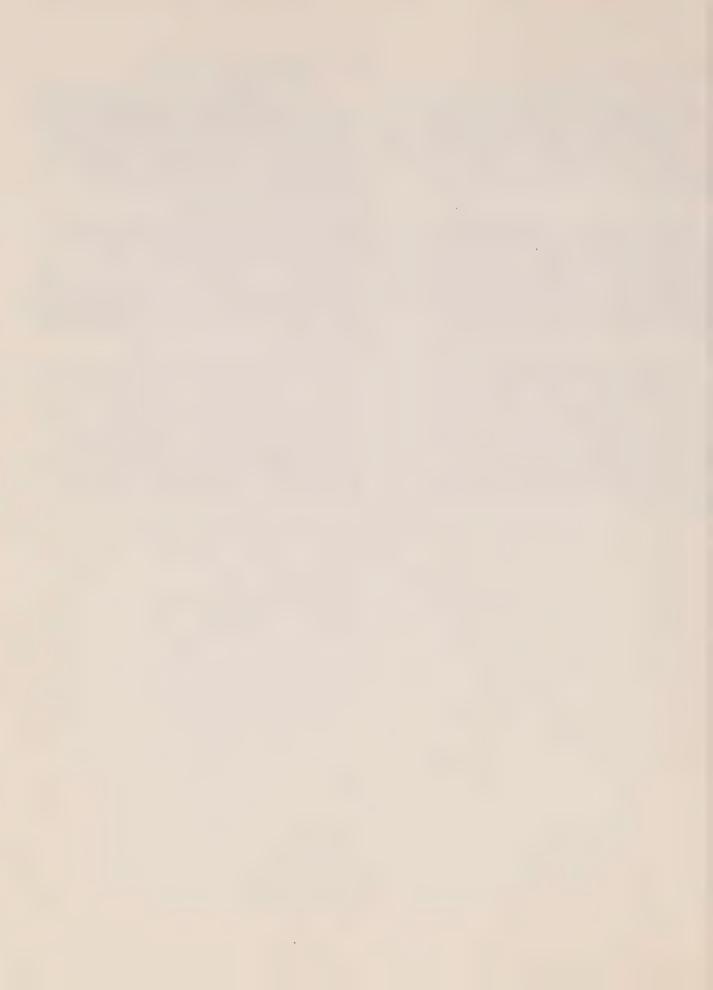

The installed generating capacity of steam plants increased from 27,225,337 kw. in 1977 to 29,960,874 kw. in 1978. Ontario Hydro accounted for 65.8% of the increase with the addition of two 500,000 kw. units at Nanticoke and one 800,000 kw. unit at Bruce. Saskatchewan Power Corporation installed one 292,500 kw. unit at Boundry Dam. AEC Power Ltd., installed four units with a total generating capacity of 210,000 kw. at their new location at Mildred Lake.

### REVUE DES RÉSULTATS DE L'ENQUÊTE

En date du 31 décembre 1978, la puissance génératrice installée au Canada était de 74,506,768 kW, soit 5.5 % de plus que les 70,575,244 kW enregistrés un an auparavant. Voici les augmentations observées par type: hydro-électrique, 1,087,554 kW (2.6 %); vapeur, 2,735,537 kW (10 %); combustion interne, 39,093 kW (6.4 %) et turbines à gaz, 69,340 kW (3.5 %).

Dans le cas de l'hydro-électricité, la puissance génératrice installée est passée de 40,809,965 kW à 41,897,519 kW en 1978. La mise en service par l'Hydro Québec de trois unités de 151,300 kW au barrage Outardes n° 2 a compté pour 41.7 % de l'augmentation totale. La Nova Scotia Power Corporation a commencé l'exploitation de deux unités de 100,000 kW à Wreck Cove, pendant que la société Manitoba Hydro ajoutait quatre unités de 98,000 kW à Long Spruce et trois unités de 31,000 kW à Jenpeg.

La puissance génératrice installée des centrales à vapeur a augmenté en 1978, passant de 27,225,337 kW en 1977 à 29,960,874 kW. Ontario Hydro est intervenue pour 65.8 % du gain total, avec l'addition de deux unités de 500,000 kW à Nanticoke et d'une unité de 800,000 kW à Bruce. Une unité de 292,500 kW a été installée à Boundry Dam par la Saskatchewan Power Corporation, alors que quatre unités totalisant 210,500 kW ont été mises en service par la AEC Power Ltd. à sa nouvelle centrale de Mildred Lake.

### HEADING EXPLANATIONS AND NOTES

### All Equipment

<u>Plant name</u>. Where the plant has no official name, a name (usually the same as its location) has been assigned.

<u>Latitude and longitude</u>. In degrees and minutes.

Year. Year of installation.

Manufacturer. See codes.

### Hydro

Water supply. Name of lake, creek, river or reservoir.

Operating heads. Given in feet, the average annual maximum, minimum and normal.

Average annual flow. Expressed in cubic feet per second.

Runner. See codes.

RPM. Revolutions per minute.

Head. Design head given in feet.

Turbine capacity. Given in horsepower.

### Steam

Steam. Steam conditions expressed in pounds per square inch gravitational and degrees Fahrenheit: steam production expressed in thousands of pounds per hour.

Type. See codes.

Throttle. Throttle conditions in pounds per square inch gravitational and degrees Fahren-

RPM. Revolutions per minute.

Capacity. Maximum continuous kilowatt rating.

### Internal Combustion

Type. See codes.

RPM. Revolutions per minute.

### Gas Turbine

Cycle. See codes.

Shafts. Number of shafts.

Capacity. Kilowatt capacity at ambient temperatures of 0 and 80 degrees Fahrenheit.

### EXPLICATION DES TITRES ET DES NOTES

### Tout genre

Nom de la centrale. Lorsque la centrale n'a pas de nom officiel, on lui a affecté un nom (le plus souvent, celui de l'emplacement).

Latitude et longitude. En degrés et minutes.

Année. Année d'installation.

Fabricants. Voir codes.

### Hydro

Source hydraulique. Nom du ruisseau, du fleuve, de la rivière ou du réservoir.

Hauteur de chute. En pieds, moyenne annuelle maximum, minimum et normale.

Débit annuel moyen. En pieds cubes par seconde.

Turbine. Voir codes.

T/MN. Nombre de tours à la minute.

Chute. Hauteur théorique de chute, en pieds.

Capacité de turbine. Donnée en cheval vapeur.

### Vapeur

<u>Vapeur</u>. Pression dynamique de la vapeur en livres par pouce carré et température en degrés Fahrenheit: production de vapeur en millier de livres par heure.

Type. Voir codes.

Soupage. Pression dynamique à la soupage en livres par pouce carré et température en degrés Fahrenheit.

T/MN. Nombre de tours à la minute.

 $\begin{array}{ll} \underline{\text{Capacit\'e}}. & \text{Puissance nominale maximum continue en} \\ \hline \text{kilowatts.} \end{array}$ 

### Combustion interne

Type. Voir codes.

T/MN. Nombre de tours à la minute.

### Turbines à gaz

Cycle. Voir codes.

Arbres. Nombre d'arbres.

Capacité. Puissances en kilowatt et aux températures ambiantes de 0 degrés et de 80 degrés Fahrenheit.

### SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ${\ensuremath{\bullet}}{\ensuremath{\bullet}}{\ensuremath{\bullet}}$  figures not appropriate or not applicable.
  - nil or zero.
- -- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

### SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
  - néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

### INTRODUCTION

The survey for this publication was conducted by Statistics Canada with the coperation of the Canadian Electrical Association and various federal government departments. It endeavours to provide a detailed listing of prime movers and generating equipment installed as of December 31, 1979. Survey coverage is limited to those utilities and companies which have at least one plant with a total generating capacity of over 500 kW. and is exclusive of auxiliary equipment installed only for generating station service.

Plants operated by each utility or company are listed alphabetically and the generator units are listed in chronological sequence.

This edition is presented in a new format. The major changes incorporated involve; the elimination from print of data which are repetitious (e.g., over 95% of all generators have a frequency of 60) or incomplete (e.g., moment of inertia data available for only 40% of all units) and the publication of the principal fuel for thermal plants. "Data not now shown in this revised publication format are available on request".

Between the two World Wars, three editions of a "Directory of Central Electric Stations" were produced by the Dominion Water Power and Reclamation Service of the Department of the Interior in collaboration with the Dominion Bureau of Statistics. In this directory, both the equipment and the service provided by electric utilities and companies which sold part of their generation were described in considerable detail but no information was provided on industrial plants which produced electric energy solely for own use. Also, no information was obtain from plants located in what is now the province of Newfoundland. The last of these directories was published in 1928, although a supplement was issued in 1936.

In 1937, the Dominion Bureau of Statistics produced a mimeographed list of "Power Plants of Large Central Electric Stations". This list grouped hydro and thermal plants by province and company showing their total horsepower capacity and precise geographic location.

### INTRODUCTION

L'enquête qui a servi à cette publication a été effectuée par Statistique Canada avec la collaboration de l'Association canadienne de l'électricité et divers ministères fédéraux. On s'applique à fournir une liste détaillée des moteurs primaires et des générateurs électriques installés au 31 décembre 1979. La couverture de l'enquête se limite aux services d'utilité et aux sociétés ayant au moins une centrale dont la puissance génératrice totale dépasse 500 kW et ne comprend pas le matériel auxiliaire installé exclusivement au profit des centrales génératrices.

Les centrales exploitées par les divers services d'utilité et les diverses sociétés figurent dans l'ordre alphabétique, et les générateurs figurent dans l'ordre chronologiques.

Le présent numéro adopte une nouvelle présentation. Parmi les principaux changements, mentionnons; l'élimination des données redondantes (ex., 95% des générateurs ont une fréquence de 60) ou incomplètes (ex., les données sur le moment d'inertie n'englobent que 40% des unités) et la publication des données sur le combustible principal des centrales thermiques. Les données anciennement publiées sont fournies sur demande.

Entre les deux guerres mondiales, trois éditions d'un "Répertoire des centrales électriques" ont été publiées par le service fédéral responsable de l'énergie hydro-électrique au ministère de l'Intérieur, en collaboration avec le Bureau fédéral de la statistique. Ce répertoire décrivait d'une manière très détaillée le matériel des services d'utilité et des compagnies qui ven-daient une partie de l'énergie qu'elles produisaient, de même que les services assurés par ces entreprises. Cependant il ne comportait aucun renseignement au sujet des centrales industrielles qui produisaient de l'électricité pour leur usage exclusif. Aucun renseignement ne parvenait de ce qui est devenu la province de Terre-Neuve. Le dernier de ces répertoires a paru en 1928, bien qu'un supplément a été publié en 1936.

En 1937, le Bureau fédéral de la statistique a établi une liste polycopiée qui énumérait les "usines productrices des grandes centrales électriques". Cette liste groupait les centrales hydro-électriques et thermiques par province et par société, et indiquait leur capacité totale de production en cheval vapeur ainsi que leur emplacement exact.

Previous reports titled Inventory of Prime Mover and Electric Generating Equipment were published for 1958, 1961, 1966 and 1969. Beginning with the 1971 edition, this report is published on an annual basis.

Auparavant, sous le titre "Inventory of Prime Mover and Electric Generating Equipment" des publications hors série ont paru en 1958, 1961, 1966 et 1969. Commençant avec l'édition de 1971, ce rapport est publié à chaque année.

### REVIEW OF SURVEY RESULTS

Total installed generating capacity in Canada as of December 31, 1979 was 77 227 170 kW., an increase of 3.6% over the 74 506 768 kW. recorded a year earlier. Increases by type were: hydro, 2 111 004 kW. (5%); steam, 364 868 kW. (1.2%); internal combustion, 16 670 kW. (2.5%) and gas turbine, 227 860 kW. (11.3%).

Hydro Quebec was responsible for 58.4% of the total increase in hydro capacity in Canada. LG2, part of the giant James Bay project, came into service in 1979 with a total installed capacity of 1 332 000 kW. Manitoba Hydro increased their generating capacity by adding four 98 000 kW. units at Long Spruce and two 31 000 kW. units at Jenpeg. New Brunswick Electric Power Commission added one 110 000 kW. unit at Mactaquac. British Columbia Hydro installed one unit of 202 000 kW. at their new location Seven Mile.

Steam generating additions include two coal-fired units in the Atlantic region, Nova Scotia Power Corporation's new 150 000 kW. unit plant at Lingan and New Brunswick Power Corporation's 200 000 kW. unit at Dalhousie #2. Newfoundland and Labrador Hydro added one 150 000 kW. unit at Holyrood. Edmonton Power increased the capacity at their Clover Bar plant by 165 000 kW.

Installation by Hydro Quebec of three units of 50 220 kW. at La Citière accounted for the significant increase in gas turbine generating capacity.

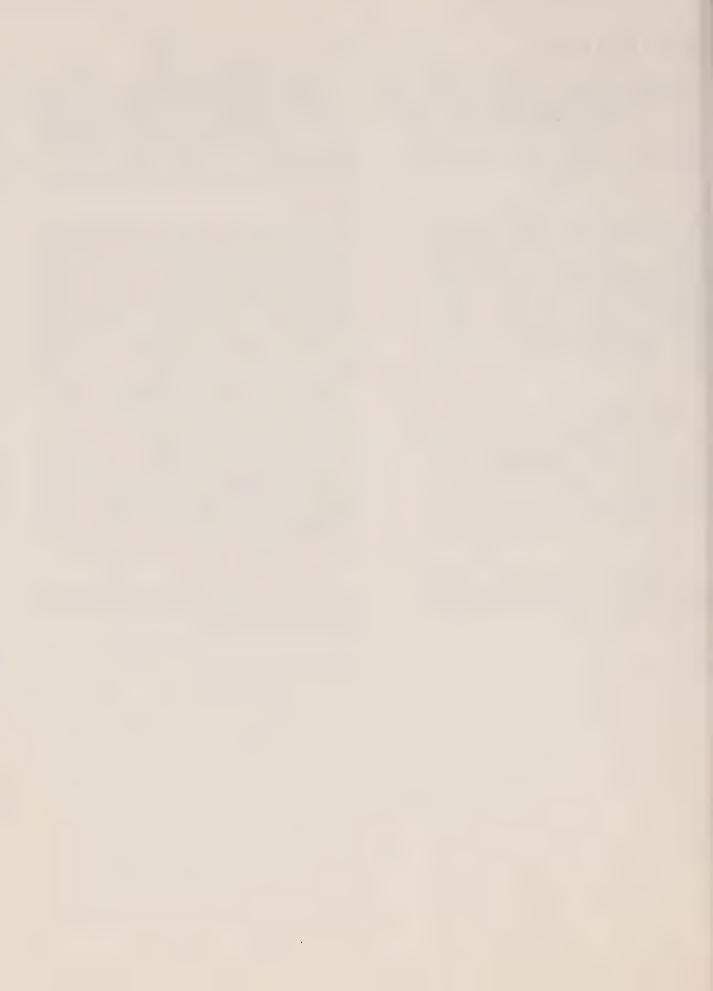

### REVUE DES RÉSULTATS DE L'ENQUÊTE

En date du 31 décembre 1979, la puissance génératrice installée au Canada totalisait 77 227 170 kW, soit 3.6% de plus que les 74 506 768 kW enregistrés un an auparavant. Voici les augmentations observées par type: hydro-électrique, 2 111 004 kW (5%); thermique à vapeur, 364 868 kW (1.2%); combustion interne, 16 670 kW (2.5%); et turbines à gaz, 227 860 kW (11.3%).

L'Hydro Québec est intervenue à elle seule pour 58.4% de l'augmentation totale de la puissance hydro-électrique au Canada. La centrale LG2, qui fait partie du projet géant de la Baie James, est entrée en service en 1979 avec une puissance installée totale de l 332 000 kW. La société "Manitoba Hydro" a accru sa puissance génératrice grâce à quatre unités supplémentaires de 98 000 kW à Long Spruce et deux autres de 31 000 kW à Jenpeg. La Commission d'énergie électrique du Nouveau-Brunswick a ajouté une unité de 110 000 kW à Mactaquac. La société "British Columbia Hydro" a installé une unité de 202 500 kW à sa nouvelle centrale de Seven Mile.

Dans le cas de l'électricité thermique à vapeur, il y a eu notamment l'addition de deux unités chauffées au charbon dans la région de l'Atlantique, soit la nouvelle centrale de 150 000 kW de la "Nova Scotia Power Corporation" à Lingan et l'unité de 200 000 kw de la "New Brunswick Power Corporation" à la centrale n°2 de Dalhousie. La "Newfoundland and Labrador Hydro" a ajouté une unité de 150 000 kW à Holyrood. La société "Edmonton Power" a augmenté de 165 000 kW la puissance de sa centrale de Clover Bar.

L'important accroissement de la puissance génératrice des turbines à gaz est attribuable à l'installation par l'Hydro Québec de trois unités de 50 220 kW à La Citière.

### HEADING EXPLANATIONS AND NOTES

### All Equipment

Plant Name. Where the plant has no official name, a name (usually the same as its location) has been assigned.

Latitude and Longitude. In degrees and minutes.

Year. Year of installation.

Manufacturer. See codes.

### Hydro

Water Supply. Name of lake, creek, river or reservoir.

Operating Head. Given in feet, the average annual maximum, minimum and normal.

Average Annual Flow. Expressed in cubic feet per second.

Runner. See codes.

RPM. Revolutions per minute.

Head. Design head given in feet.

Turbine Capacity. Given in horsepower.

### Steam

**Steam.** Steam conditions expressed in pounds per square inch gravitational and degrees Fahrenheit: steam production expressed in thousands of pounds per hour.

Type. See codes.

Throttle. Throttle conditions in pounds per square inch gravitational and degrees Fahrenheit.

RPM. Revolutions per minute.

Capacity. Maximum continuous kilowatt rating.

### Internal Combustion

Type. See codes.

RPM. Revolutions per minute.

### Gas Turbine

Cycle. See codes.

Shafts. Number of shafts.

Capacity. Kilowatt capacity at ambient temperatures of 0 and 80 degrees Fahrenheit.

### EXPLICATION DES TITRES ET DES NOTES

### Tout genre

Nom de la centrale. Lorsque la centrale n'a pas de nom officiel, on lui a affecté un nom (le plus souvent, celui de l'emplacement).

Latitude et longitude. En degrés et minutes.

Année. Année d'installation.

Fabricants. Voir codes.

### Hydro

Source hydraulique. Nom du ruissean, du fleuve, de la rivière ou du réservoir.

Hauteur de chute. En pieds, moyenne annuelle maximum, minimum et normale.

Débit annuel moyen. En pieds cubes par seconde.

Turbine. Voir codes.

T/MN. Nombre de tours à la minute.

Chute. Hauteur théorique de chute, en pieds.

Capacité de turbine. Donnée en cheval vapeur.

### Vapeur

Vapeur. Pression dynamique de la vapeur en livres par pouce carré et température en degrés Fahrenheit: production de vapeur en millier de livres par heure.

Type. Voir codes.

Soupage. Pression dynamique à la soupage en livres par pouce carré et température en degrés Fahrenheit.

T/MN. Nombre de tours à la minute.

Capacité. Puissance nominale maximum continue en kilowatts.

### Combustion interne

Type. Voir codes.

T/MN. Nombre de tours à la minute.

### Turbine à gaz

Cycle. Voir codes.

Arbres. Nombre d'arbres.

Capacité. Puissances en kilowatt et aux températures ambiantes de 0 degrés et de 80 degrés Fahrenheit.
